IN THE SPECIFICATION:

Pages 2-3, please amend paragraph [0005] of the specification starting on page 2, line 18 and ending on page 3, line 5 of the specification as follows:

[0005] However, it is disadvantageous that because of the use of a larger number of storage and retrieval units, which are nevertheless heavy and complicated, and which ultimately ensure a high commissioning output, high costs arise for setting up a shelf. In addition, great shelf heights are possible only conditionally in manufacturing the shelves or not possible because of the static overall weight with slender design of the shelf. Great overall heights are possible only conditionally already because of the action interaction of the global static and dynamic forces of all storage and retrieval units.
